

# ARCO

## Visitor Management System (ViMS)

ARCO Visitor Management System (ViMS) is a software solution within the ARCO Platform designed for a quick and accurate identification of visitors in facilities with a high frequency of guests or a high level of safety requirements.

Communicates with the SPG ID Camera input data to automatically populate visitor data fields and captures live photos using desktop cameras.

User friendly graphic interface

Quick and accurate visitor registration

Black and white list of visitors

More than 2000 documents worldwide

Manage visit details

Reads ID cards, driver licenses, passports, etc.

**Benefits**

Streamline Visitor Management

Takes your business to a higher level

Increase Data Accuracy

Improves business quality by personalization of service

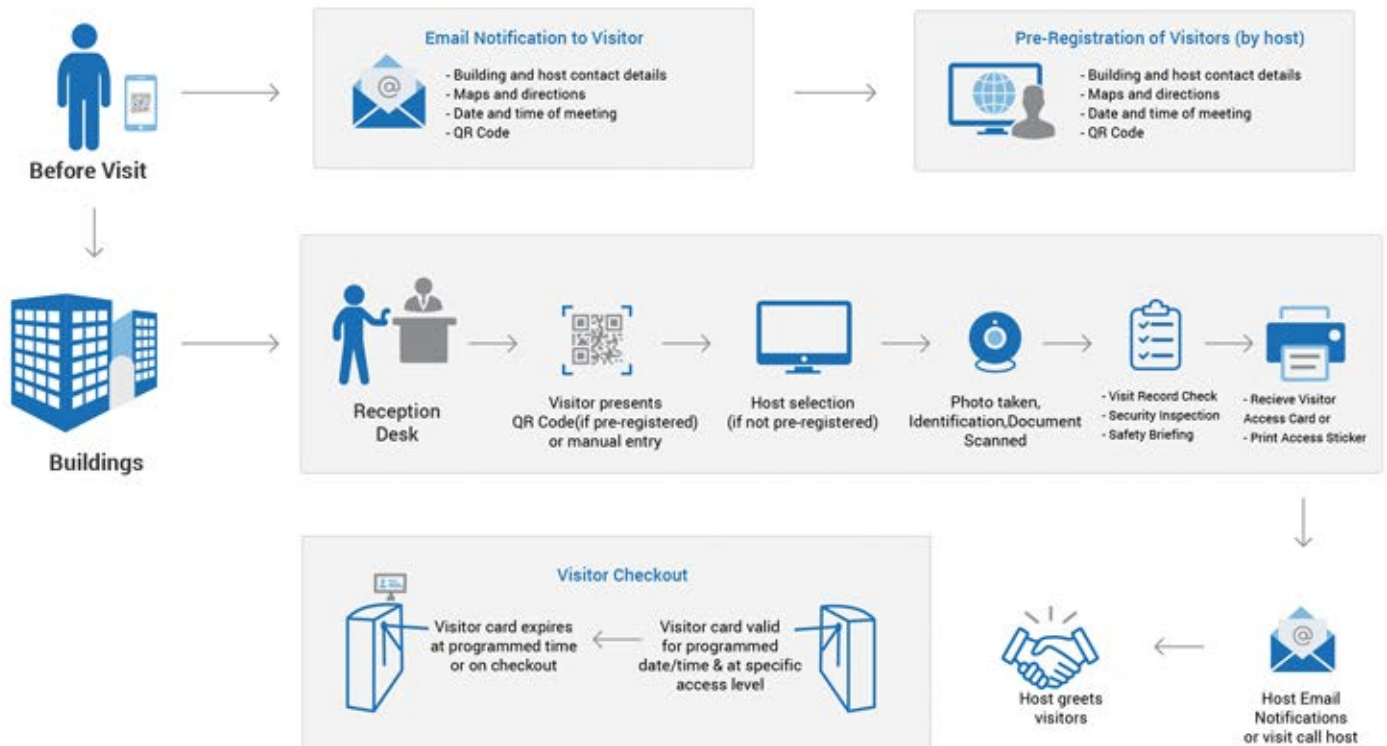

Reduces costs and increases profits

Increases the security level by saving document image in a database

**ARCO ViMS Workflow**
